# Subject Index of Volume 24

Adaptive control scheme
  for load–frequency control of multiarea power systems, 183, 189
Arc furnace
  simulated, reduction of voltage flicker of, by reactive compensation, 135
Arcing ground faults
  electromagnetic model for conductor bouncing phenomenon in, 1
Artificial neural network
  based identification of dynamic equivalents, 39

Capacitors
  switched, voltage balancing using, 85
Compensation schemes
  series and shunt, for AC transmission systems, maximum power transfer capability within voltage stability limits of, 227
Computer aided system
  to automate restoration of electrical power supply, 119
Computer modelling
  of microwave materials, 141
Conductor
  overhead-line, carrying constant current, statistical distribution of temperature rise of, 237
Conductor bouncing phenomenon
  in arcing ground faults, electromagnetic model for, 1
Connectionist expert system
  for fault diagnosis, 99
Control scheme
  adaptive, for load–frequency control of multiarea power systems, 183, 189
  self-tuning, application of, to power system with multimode oscillations, 91

Damping
  of power system oscillations by active and reactive power modulation superconducting magnetic energy storage unit, 65
Data transmission
  digital, through power distribution networks, 7
Disjoint products
  sum of, improved minimizing algorithm for, by Shannon's expansion, 111
Dispatch
  emission constrained dynamic, 55
Distribution networks
  power, digital data transmission through, 7
Distribution systems
  expert system for comprehensive on-line economic–security controls of, 165
Disturbance rejection
  in multiarea power systems, decoupling approach to, 173
Dynamic dispatch
  emission constrained, 55
Dynamic equivalents
  artificial neural network based identification of, 39

Economic–security controls
  comprehensive on-line, of distribution systems, expert system for, 165
Electrical power supply
  computer aided system to automate restoration of, 119
Electrostatic field problems
  multidielectric, with sharp-edged electrodes, review of finite-difference method for, 19
Emission constrained dispatch
  dynamic, 55
Errors
  parameter, in power system state estimation, efficient treatment of, 105
Expert system
  for comprehensive on-line economic–security controls of distribution systems, 165
  connectionist, for fault diagnosis, 99

Fault diagnosis
  connectionist expert system for, 99
Finite-difference method
  for multidielectric electrostatic field problems with sharp-edged electrodes, review of, 19
Flicker
  voltage, of simulated arc furnace, reduction of, by reactive compensation, 135
Fuzzy approach
  for generator maintenance scheduling, 31

Generator maintenance scheduling
  fuzzy approach for, 31

Harmonic analysis
  and transformer inrush current calculation, simple model for, 153
Hydrothermal scheduling
  long-range, simple and effective local variation algorithm for, 13

Induction generator
  isolated self-excited cage, voltage regulator for, 75

Line flow calculation
  real-time, using new sensitivity method, 127
Linewidth parameters
  of microwave garnets, predictive analysis of, 149
Load–frequency control
  of multiarea power systems, adaptive control scheme for, 183, 189
Long-range scheduling
  hydrothermal, simple and effective algorithm for, 13

Maintenance scheduling
  of generators, fuzzy approach for, 31
Microwave garnets
  predictive analysis of linewidth parameters of, 149
Microwave materials
  computer modelling of, 141

Minimizing algorithm
improved, for sum of disjoint products by Shannon's expansion, 111
Multiarea power systems
adaptive control scheme for load–frequency control of, 183, 189
decoupling approach to disturbance rejection in, 173
Multidielectric electrostatic field problems
with sharp-edged electrodes, review of finite-difference method for, 19
Multiphase power transmission
survey of research, 207

Neural network
artificial, based identification of dynamic equivalents, 39
based calculation of short-circuit currents in three-phase systems, 49

Oscillations
multi-mode, application of self-tuning control scheme to power system with, 91
power system, damping of, by active and reactive modulation superconducting magnetic energy storage unit, 65
Overhead-line conductor
carrying constant current, statistical distribution of temperature rise of, 237

Parameter errors
in power system state estimation, efficient treatment of, 105
Petri nets
modelling and recovery analysis of protection schemes using, 199
Power modulation
active and reactive, superconducting magnetic energy storage unit, damping of power system oscillations by, 65
Power supply
electrical, computer aided system to automate restoration of, 119
Power transfer capability
maximum, within voltage stability limit of series and shunt compensation schemes for AC transmission systems, 227
Power transmission
survey of research, 207
Protection schemes
modelling and recovery analysis of, using Petri nets, 199

Scheduling
long-range hydrothermal, simple and effective local variation algorithm for, 13
Security–economic controls
comprehensive on-line, of distribution systems, expert system for, 165
Self-excited cage induction generator
isolated, voltage generator for, 75
Self-tuning control scheme
application of, to power system with multi-mode oscillations, 91
Sensitivity method
new, real-time line flow calculation using, 127
Shannon's expansion
improved minimizing algorithm for sum of disjoint products by, 111
Short-circuit currents
in three-phase systems, neural network based calculation of, 49
State estimation
power system, efficient treatment of parameter errors in, 105
State estimator
internal decoupled tracking, using external system equivalents, 217
Superconducting magnetic energy storage unit
active and reactive power modulation, damping of power system oscillations by, 65
Switched capacitors
voltage balancing using, 85

Temperature rise
of overhead-line conductor carrying constant current, statistical distribution of, 237
Tracking state estimator
internal decoupled, using external system equivalents, 217
Transformer inrush current calculation
and harmonic analysis, simple model for, 153
Transmission
of data, digital, through power distribution networks, 7
of power, multiphase, survey of research, 207
Transmission systems
AC, maximum power transfer capability within voltage stability limit of series and shunt compensation schemes for, 227

Voltage balancing
using switched capacitors, 85
Voltage flicker
of simulated arc furnace, reduction of, by reactive compensation, 135
Voltage regulator
for isolated self-excited cage induction generator, 75
